MONTAGUE INTRODUCES TOOL-FREE ADJUSTABLE STEM SYSTEM

CAMBRIDGE, MA – Montague Corporation, a leader in full-size folding bikes and bike components for over 20 years, announces the introduction of Octagon, an adjustable stem system that combines tool-free adjustment with up to 90 mm of adjustable length. The system is now available as an aftermarket component upgrade for all bikes with threadless steel steerer tubes.

The Octagon system is already used on Montague's line of full size 700c folding pavement bikes, and will soon be available for dealers to offer to their customers. The system allows consumers a more convenient option for handlebar height adjustment, anywhere, anytime, without the use of tools. It fits all standard threadless steel forks and is comparable in weight to quill stems.

"We've received fantastic feedback from our customers using the system on their Montague pavement bikes and we're already receiving inquiries from consumers asking where they can get the after-market product." said David Montague, President and founder of Montague Corporation. "In addition to filling a need in the consumer market, it's easy for dealers to install and demonstrate to their customers. The feedback from our dealer research reinforced this and the anticipated demand for this product is strong."

For the most up to date information on where and when the Octagon system will be available, go to www.octagoncycles.com. Demonstrations of the Octagon can be seen at the Montague Interbike booth #4405. Interested distributors are invited to contact Jonathan Vandenberg at 617-491-7200 or jvandenberg@montaguebikes.com.

**About Montague Corporation**

Montague Corporation is based in Cambridge, Massachusetts and is dedicated to advancing cycling through the development of inventive technologies that provide its customers with an unprecedented combination of performance and convenience.
